WEATHER SYNOPSIS BY REGION

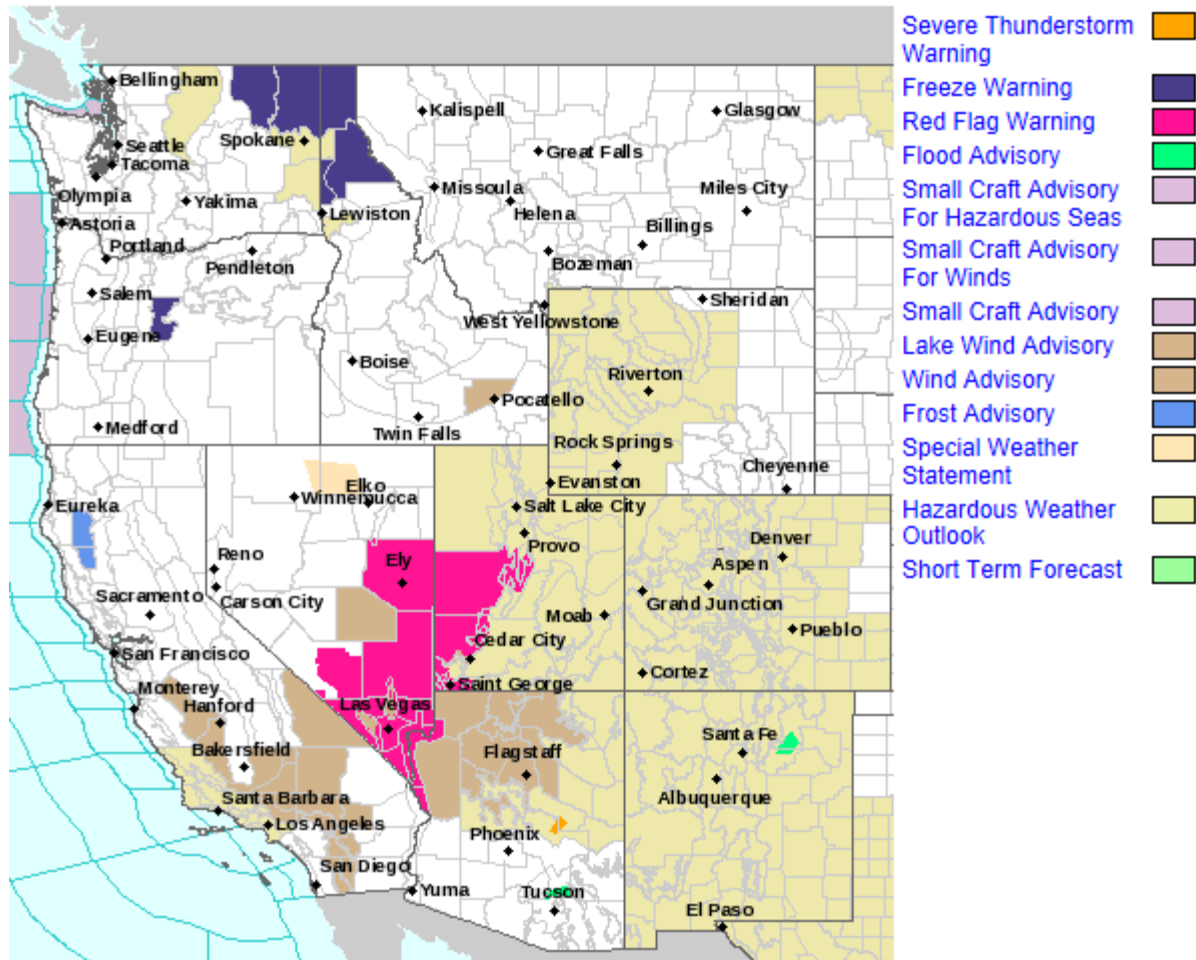

NORTHERN CALIFORNIA

Mild and breezy conditions are expected today as a low pressure center forms in eastern areas along the front and begins to move east across Nevada. There is a slight chance of showers and thunderstorms from about Plumas County south today. On Wednesday the last of the low pressure trough will move out of the area and temperatures will begin to climb, reaching normal or a bit above normal by Thursday as a high pressure ridge builds in. The ridge will be with us through the weekend, producing above normal temperatures and periods of dry offshore winds. The most likely day for low relative humidity (RH) and gusty offshore winds is Friday.

SOUTHERN CALIFORNIA

Windy across the mountains and deserts through this evening. A trough dropping down from Canada will bring south to west winds of 20 to 30 mph with gusts to 50 mph to the wind prone mountain and desert areas through this evening. This trough will also bring 5 to 10 degrees of cooling away from the coastal areas today. Maximum temperatures will be in the mid 50s to mid 60s across the mountains with upper 60s and 70s in the valleys today. Minimum humidity will be between 15% and 30% above the marine layer today. The marine will become around 4,000 feet deep this morning. Areas of drizzle will occur from the coast to the lower coastal mountain slopes this morning from the deep marine layer. Scattered showers and thunderstorms will also occur over Mono County today, but most of the rainfall with this trough will stay over Nevada. A weak ridge of high pressure will build into California from the Pacific Ocean bringing significant warming and drying to the region Wednesday through Friday. Temperatures will be near normal Friday through this weekend and minimum humidity will be mainly in the teens away from the coastal areas Thursday through this weekend. Winds will be light across the area Wednesday through this weekend.
